a. How the policy data needed for valuation is accessed.	The Policy data required for the purpose of valuation is obtained from the policy administration system (Life-Asia for individual business and Group Asia for group business). The data is subject to various checks before using it for liability calculations.
b.How the valuation bases are supplied to the system	The valuation projections are primarily modelled (separately for each product) in Prophet – the actuarial software used for calculating the mathematical reserves. The software allows the specification and input of each of the valuation parameters for the modelled products.
