Monthly Fund Performance
January 2018 Edition

Month gone by - A snapshot

Global markets remained buoyant amid improving growth outlook, with IMF upgrading its global growth forecasts. While developed market index rose by 5.2% in January, the emerging market index generated a return of 8.3%. Indian equity market followed, with the rally mainly led by large-caps. The Union Budget 2018 was a judicious mix of populist and pro-growth policies, accompanied with moderate fiscal consolidation. Domestic bond yields rose sharply post the budget led by inflation concerns and fiscal slippage worries for FY19 amid slightly aggressive revenue targets.

Union Budget 2018 - a slight populist tilt as expected

The Union Budget 2018 is marginally tilted towards populism accompanied with continued focus on rural and infrastructure spending. The government remained on the path of fiscal consolidation, albeit at a modest pace, delivering fiscal deficit at 3.5% of GDP in FY18 and targeting 3.3% for FY19. The budget focused on agriculture and farm sectors, promising an increase in minimum support price (MSP) of Kharif crops to 1.5x of the cost of produce. The budget also provided a big push to social sectors such as healthcare and education without compromising on infrastructure spending.

Expect economic growth to pick-up in FY19

The Central Statistics Office (CSO) has pegged the advance estimate for India's FY18 GDP growth at 6.5% - the lowest in four years. However, the Economic Survey expects GDP growth to be a tad better at 6.75% in FY18 and pegs it in the range of 7-7.5% in FY19. The revival in FY19 is likely to be led by 1) easing of GST-led disruptions, 2) improvement in urban and rural consumption, 3) government's sustained focus on infrastructure sector and 4) global recovery aiding in bolstering exports.

Fixed income market performance

Fixed income market declines sharply: The fixed income market remained under pressure ahead of the budget led by continued fears of fiscal slippage and inflation concerns. Sustained hardening of global bond yields further added to the woes. However, selling intensified post the budget, with bond yields rising by ~18bps on the budget day. This was largely on account of 1) rising concerns on inflation amid potentially significant MSP hikes, 2) marginally higher-than-expected market borrowings and 3) slightly aggressive revenue targets for FY19. The 10-year G-sec yield rose by 10bps to end the month at 7.4% (+20bps YTD to 7.5% currently).

Expect bond yields to remain firm: The government's promise to increase MSPs to 1.5x of the cost of produce has significantly added to inflation concerns. This, coupled with renewed fears of government slipping on its FY19 fiscal deficit target as well, is likely to keep fixed income market under pressure in the near-term. Moreover, gradual monetary policy normalisation by global central banks is likely to add to market woes. The key factors to watch out for fixed income markets in the near-term include 1) RBI's monetary policy stance in the wake of recalibration of fiscal glide path, 2) inflation trajectory and 3) trend of GST collections.

Equity market performance

Equity market remains buoyant: The equity market rally continued in January, in-line with the broader emerging market pack. This was led by better-than-expected corporate earnings, positive commentary by the IMF on economic growth, rationalisation of GST rates and amendment in FDI policies. Moreover, foreign institutional investors turned strong buyers in January with net inflows at US\$ 2bn. The rally was predominantly led by large-caps, with mid-caps witnessing profit booking. The Nifty index rose by 4.7% in January while the mid-cap index declined by 2.6%.

Medium-term outlook for equities positive; LTCG a sentiment dampener: The introduction of 10% long term capital gains (LTCG) tax on equity gains above Rs 1 lakh has come as a disappointment for the market. However, the modest pace of fiscal consolidation, coupled with a credible mix of populism and growth-oriented spending, has been in-line with expectations. The government's strong focus on boosting farm incomes bodes well for rural consumption. In the near-term, equities are likely to remain range-bound amid limited triggers. On the positive side, expected improvement in corporate earnings is likely to provide support to market valuations.

The time to consider Critical Illness Insurance is Now

As we celebrate world Cancer day in February, we would like to highlight insurance covers with options for critical illness. The best way to illustrate this is through an ex; Mayank Desai, a marketing executive, was diagnosed with cancer and had a long and painful recovery. While the insurance company took care of the hospital bills, Desai's family had to undergo financial stress to meet household expenses as he stayed home and recuperated.

Desai's case is by no means unique as an increasing number of people are falling prey to critical illness at younger age. At the same time, the cost of health care is rising and crippling Indian households. Keeping this scenario in mind, investing in a comprehensive health insurance plan to safeguard the interest of the family, has become imperative.

One needs to understand the structure and the benefits of different health insurance products before investing. Health insurance plans can be broadly classified in two categories, namely indemnity based and benefits based. Under an indemnity based plan the insured is paid the entire amount that he spends on medical treatment, provided it is equal to or less than the sum assured. Benefits based plans are mainly critical illness plans under which the insured can claim the entire sum assured for the treatment of a critical illness specified in the policy, irrespective of actual costs incurred.

Investing in mediclaim can prove extremely useful in case of minor ailments. However, they become futile in case the insured contracts a critical illness such as cancer which demands much larger expenses over a longer term. A critical illness plan can prove extremely beneficial in this case as the lump sum received by the insured can be used to get the illness treated by best professionals. Also the sum assured, if in excess of the medical treatment, can be used to take care of the household expenses during the time of the illness.

Investors can also go for an endowment based life insurance policy from an insurer with a Critical Illness (CI) rider as it will give them a comprehensive insurance cover. This is to say that the sum assured can be claimed by the insured in case he survives through the term or by his family in case he does not. In addition, with a CI rider to the policy, the medical expenses will also be covered in case a critical illness is contracted during the term, over and above the sum assured.

In addition to providing a cover for medical expenses, health insurance products also attract tax benefits. Investing in comprehensive health insurance therefore will not only provide investor the peace of mind but also the freedom to plan their finances to meet more fundamental financial goals.

*NIC Classification – Industrial sectors as defined under National Industrial Classification 2008

Quantitative Indicators

- **Standard Deviation (SD)** - It shows how much the variation or dispersion of a fund's daily returns has from its average. Lesser SD indicates that the daily returns are moving closer to the average. A higher SD indicates that daily returns are widely spread over a large range of value.
- **Beta** - It indicates how the fund is performing relative to its benchmark. If beta of a fund is higher than its benchmark, which is considered 1, it indicates risk-return trade-off is better and vice-versa.
- **Sharpe Ratio** - It measures the risk-reward ratio as it indicates whether higher returns come with higher or lower risk. Greater the ratio, better is the risk-adjusted performance.
- **Average Maturity** - It is the weighted average period of all the maturities of debt securities in the portfolio.
- **Modified Duration (MD)** - It is the measurable change in the value of a security in response to a change in interest rates.
- **Bond yield** - Bond yield is the amount of return an investor realizes on a bond. Several types of bond yields exist, including nominal yield (interest paid divided by the face value of the bond) and current yield (annual earnings of the bond divided by its current market price). Yield to maturity (YTM), a popular measure where in addition to coupon return it also additionally incorporates price decline/increase to face value of the bond over the maturity period.

Macroeconomic Indicators

- **Macroeconomics** - Macroeconomics is the branch of economics that studies the behavior and performance of an economy as a whole. It focuses on the aggregate changes in the economy such as unemployment, growth rate, gross domestic product and inflation. Macroeconomics analyzes all aggregate indicators that influence the economy. Government and corporations use macroeconomic models to help in formulating of economic policies and strategies.
- **Gross Domestic Product (GDP)** - GDP is one of the primary indicators used to gauge the health of a country's economy. It represents the total value of all goods and services produced over a specific time period. It can be stated in real terms or nominal terms (which includes inflation).
- **Gross value added (GVA)** - GVA is a productivity metric that measures the contribution to an economy, producer, sector or region. Gross value added provides a value for the amount of goods and services that have been produced, less the cost of all inputs and raw materials that are directly attributable to that production.
- **Index of Industrial Production (IIP)** - The index represents the production growth of various sectors in India. The index focuses on mining, electricity and manufacturing. The ongoing base year for calculation of index is 2004-2005.
- **HSBC Purchasers Managers' Index (PMI)** - Three types of indices - Manufacturing, Services and Composite Index are published on a monthly basis after surveys of private sector companies. An index reading above 50 indicates an overall increase in that variable, while below 50 shows an overall decrease.
- **Inflation** - Inflation measures the change in the prices of a basket of goods and services in a year. From a calculation standpoint, it is the percentage change in the value of the Wholesale Price Index (WPI) / Consumer Price Index (CPI) on a year-on-year basis. It occurs due to an imbalance between demand and supply, changes in production and distribution cost or increase in taxes on products. When economy experiences inflation, i.e. when the price level of goods and services rises, the value of currency reduces.

Macroeconomic Indicators

- **Nominal interest rate** - Nominal interest rate is the interest rate that does not take inflation impact into account. It is the interest rate that is quoted on bonds and loans.
- **Real interest rate** - Real interest rate adjusts for the inflation and gives the real rate of a bond or a loan.
- **Monetary Policy** - Monetary policy is the macroeconomic policy laid down by the Central bank. It involves management of money supply and interest rates to achieve macroeconomic objectives like inflation, consumption, growth and liquidity. Depending on growth-inflation dynamics, the central bank can either pursue an easy or a tight monetary policy. An expansionary/easy/ accommodative monetary policy involves expansion of money supply, mainly by keeping interest rates low, to boost economic growth. A contractionary/tight monetary policy involves reduction in money supply to control inflation in the economy.
- **Liquidity** - The Central bank of a country has to maintain an appropriate level of liquidity to help meet the credit demand of the country as well as maintain price stability. This is done by way of direct monetary policy tools such as policy rates and cash reserves to be maintained with it by banks. It is also done by indirect means such as Open market Operations (OMO) which involve sale and purchase of Government securities.
- **Fiscal Deficit** - This takes place when India's expenditure rises than its revenue. To fill this gap, the Government raises debt by issuing Government/ sovereign bonds. Fiscal deficit is usually compared with GDP to understand the financial position of the country. Rising fiscal deficit to GDP ratio is not good for the country, which requires immediate attention to cut expenditure and/or increase the source of revenue.
- **Current Account Deficit (CAD)** - Current account deficit is a measurement of a country's trade where the value of imports of goods and services as well as net investment income or transfer from abroad is greater than the value of exports of goods and services for a country. This indicates that the country is a net debtor of foreign currency, which increases the pressure on the country's existing foreign currency reserves. Current account surplus is the opposite of this.
- **Investment** - In private investment, the funds come from a private, for-profit business. A few examples of private investment are a private company's manufacturing plant, a commercial office building, or a shopping mall. In public investment, the money exchanged comes from a governmental entity such as a city, state, country, etc. It would involve roads, airports, dams and other public infrastructure.

Market Indices

- **Nifty 50 Index** - It is a well diversified 50 stock index accounting for 22 sectors of the economy. It is used for a variety of purposes such as benchmarking fund portfolios, index based derivatives and index funds.
- **CRISIL Composite Bond Fund Index** - It seeks to track the performance of a debt portfolio that includes government securities and AAA/AA rated corporate bonds.

Fixed Income Indicators

- **Repo Rate** - The rate at which the RBI lends money to commercial banks is called repo rate. It is an instrument of monetary policy. Whenever shortage of funds banks has, they can borrow from the RBI.
- **Cash Reserve Ratio (CRR)** - CRR is the amount of funds which the banks need to keep with the RBI. If the RBI decides to increase the CRR, the available amount with the banks comes down. The RBI uses the CRR to drain out excessive money from the system.

Fixed Income Indicators

- **Marginal Standing Facility (MSF)** - It is a rate at which the RBI provides overnight lending to commercial banks over and above the repo window (repo rate). The interest rate charged is higher than the repo rate and hence it is used when there is considerable shortfall in liquidity.
- **Statutory Liquidity ratio (SLR)** - In India, commercial banks are required to maintain a certain percentage of their total deposits (net demand and time liabilities) in notified Government securities to ensure safety and liquidity of deposits. This percentage is known as the SLR rate. If the RBI or Central Bank reduces the SLR rate, it means that higher liquidity will be available to banks for their lending activity and vice-versa.

Others

- **Goods and Services Tax (GST)** - The GST is one of the biggest indirect tax reforms, with an aim to make India one unified common market. It is a single tax on the supply of goods and services, right from the manufacturer to the consumer. Credits of input taxes paid at each stage will be available in the subsequent stage of value addition, which makes GST essentially a tax only on value addition at each stage. The final consumer will thus bear only the GST charged by the last dealer in the supply chain, with set-off benefits at all the previous stages.
- **Foreign institutional investors (FIIs)** - FIIs are those institutional investors who invest in the assets belonging to a different country other than that where these organizations are based. These are the big companies such as investment banks, mutual funds etc, which invest considerable amount of money in Indian equity and fixed income markets, and consequently have a strong bearing on the respective market movement and currency.
- **Domestic institutional investors (DIIs)**- DIIs are those institutional investors who undertake investment in securities and other financial assets of the country they are based in. Institutional investment is defined to be the investment done by institutions or organizations such as banks, insurance companies, and mutual fund houses in the financial or real assets of a country.
- **Emerging market (EM) economy**- An emerging market economy describes a nation's economy that is progressing toward becoming more advanced, usually by means of rapid growth and industrialization. These countries experience an expanding role both in the world economy and on the political frontier.
- **Organization of the Petroleum Exporting Countries (OPEC)**- The OPEC was formed in 1960 to unify and coordinate members' petroleum policies. This was aimed at ensuring the stability of oil markets in order to secure an efficient, economic, and regular supply of petroleum to customers as well as a steady income to producers with a fair return. Members of OPEC include Iran, Iraq, Syria, Kuwait, Saudi Arabia, Bahrain, Qatar, the United Arab Emirates (or UAE), Oman, and Yemen. The OPEC countries produce 40% of the world's crude oil.
- **Federal Open Market Committee (FOMC)**- The FOMC is the monetary policymaking body of the Federal Reserve System. The FOMC is composed of 12 members - seven members of the Board of Governors and five of the 12 Reserve Bank presidents.
- **International Monetary Fund (IMF)**- The IMF, formed in 1945, is an international organization of 189 countries, headquartered in Washington, D.C. The key objectives include fostering global monetary cooperation, securing financial stability, facilitating international trade, promoting high employment and sustainable economic growth, and reducing poverty around the world.

ULIP

- **MetLife Mera Wealth Plan**
UIN: 117L098V01

MetLife Mera Wealth Plan is a unit linked plan that provides a financial blueprint for goals related to every stage in life. With investment options like self-managed and systematic transfer, this product caters to every risk appetite. Loyalty additions which are added to the fund value enhance fund growth and provide a superior offering for both our online as well as offline customers.

- **MetLife Smart Platinum**
UIN : 117L066V02

A Unit Linked Whole life plan for your changing life stage needs. Along with 6 Unit Linked Funds & investment strategies like auto rebalancing and Systematic Transfer Option, this plan has free unlimited switches online, which allows you to manage your investments with changing market conditions.
