Gratuity Fund Monthly Fund Performance

October 2020 Edition

Month gone by - A snapshot

The global equity markets saw a decoupling in October, as emerging markets continued to recover, while resurgence of Covid-19 infections in US and Europe and uncertainty related to US elections led to a correction in developed markets. Economic activity continues to revive in the US. However, inability to provide additional fiscal stimulus has led to a deterioration in market sentiments. Recovery momentum in Europe is likely to get adversely impacted due to re-imposition of Covid-19

lockdowns. China continues to show strong recovery led by infrastructure investments and increase in exports.

The MSCI India index rose by 1%, while MSCI Emerging Market index rose by 2%. The MSCI Developed Market index saw a decline of 3%. India government bond yields declined during the month, largely driven by RBI's accommodative monetary policy stance. Crude oil prices declined by 9% to US\$ 37/barrel, due to demand concerns.

Government continues to support economic growth

The Government continues to take targeted fiscal measures to provide support to the economy. These include enhancement of capital expenditure budget, and measures to encourage government employees to increase consumption spending. Additionally, measures have been taken to ensure that only simple interest is levied on bank loans up to Rs 2 crores during the moratorium period. The Central government has decided to lend Rs 1.1 lakh crores to states to make up for shortfall in GST revenues. These measures are expected to support gradual revival in economic activity.

Various macroeconomic data points indicate that economic activity in India continues to revive. The October GST collections have risen by 10% compared to a year ago, while Index of Industrial Production (IIP) continues to recover from its previous lows. Power generation grew 4.4% y-o-y in September 2020, indicating increase in economic activity across the country.

RBI introduces new monetary measures to keep rates low: The CPI inflation increased in September due to increase in food inflation as well as lingering supply chain issues. RBI expects inflation to ease gradually over the coming months. In the recent monetary policy, RBI stated that it would continue to take measures to enable benign financial market conditions and promote economic recovery. Foreign institutional investors (FIIs) bought US\$ 450mn of Indian debt in October.

Outlook: The measures taken by RBI to alleviate market concerns regarding high inflation and increase in government's fiscal deficit include a commitment to maintain accommodative monetary policy well into FY 2022. RBI also initiated purchase of state government bonds from secondary market for the first time. These measures led to a decline in government and corporate bond yields in October. We expect interest rates to remain soft, going forward.

Economic revival sustains market recovery: Concerns over fresh lockdowns in some countries, along with uncertainty related to US elections, has led to profit booking in global equity markets. However, the outlook for emerging markets continues to improve. The corporate earnings revision has turned positive for India, with several high frequency indicators and management commentaries suggesting faster-than-expected demand recovery in many sectors.

Indian equity markets moved up by 3.5% during the month with Banking, Information Technology and Metals sectors outperforming. FII inflows in equity markets in October was US\$ 2.5bn.

Outlook: India's macro-economic fundamentals are improving on the back of continued policy support, strong reforms momentum and benign global liquidity conditions. Corporate profitability is on the mend. Notwithstanding slightly stretched valuations and near-term volatility, equities look attractive from a medium to long term perspective.

Sanjay Kumar

NAV Movement

Date of Inception: December 20, 2010

Quantitative Indicators

- **Standard Deviation (SD)** - It shows how much the variation or dispersion of a fund's daily returns has from its average. Lesser SD indicates that the daily returns are moving closer to the average. A higher SD indicates that daily returns are widely spread over a large range of value.
- **Beta** - It indicates how the fund is performing relative to its benchmark. If beta of a fund is higher than its benchmark, which is considered 1, it indicates risk-return trade-off is better and vice-versa.
- **Sharpe Ratio** - It measures the risk-reward ratio as it indicates whether higher returns come with higher or lower risk. Greater the ratio, better is the risk-adjusted performance.
- **Average Maturity** - It is the weighted average period of all the maturities of debt securities in the portfolio.
- **Modified Duration (MD)** - It is the measurable change in the value of a security in response to a change in interest rates.
- **Bond yield** - Bond yield is the amount of return an investor realizes on a bond. Several types of bond yields exist, including nominal yield (interest paid divided by the face value of the bond) and current yield (annual earnings of the bond divided by its current market price). Yield to maturity (YTM), a popular measure where in addition to coupon return it also additionally incorporates price decline/increase to face value of the bond over the maturity period.

Macroeconomic Indicators

- **Macroeconomics** - Macroeconomics is the branch of economics that studies the behavior and performance of an economy as a whole. It focuses on the aggregate changes in the economy such as unemployment, growth rate, gross domestic product and inflation. Macroeconomics analyzes all aggregate indicators that influence the economy. Government and corporations use macroeconomic models to help in formulating of economic policies and strategies.
- **Gross Domestic Product (GDP)** - GDP is one of the primary indicators used to gauge the health of a country's economy. It represents the total value of all goods and services produced over a specific time period. It can be stated in real terms or nominal terms (which includes inflation).
- **Gross value added (GVA)** - GVA is a productivity metric that measures the contribution to an economy, producer, sector or region. Gross value added provides a value for the amount of goods and services that have been produced, less the cost of all inputs and raw materials that are directly attributable to that production.
- **Index of Industrial Production (IIP)** - The index represents the production growth of various sectors in India. The index focuses on mining, electricity and manufacturing. The ongoing base year for calculation of index is 2004-2005.
- **HSBC Purchasers Managers' Index (PMI)** - Three types of indices - Manufacturing, Services and Composite Index are published on a monthly basis after surveys of private sector companies. An index reading above 50 indicates an overall increase in that variable, while below 50 shows an overall decrease.
- **Inflation** - Inflation measures the change in the prices of a basket of goods and services in a year. From a calculation standpoint, it is the percentage change in the value of the Wholesale Price Index (WPI) / Consumer Price Index (CPI) on a year-on-year basis. It occurs due to an imbalance between demand and supply, changes in production and distribution cost or increase in taxes on products. When economy experiences inflation, i.e. when the price level of goods and services rises, the value of currency reduces.

Macroeconomic Indicators

- **Nominal interest rate** - Nominal interest rate is the interest rate that does not take inflation impact into account. It is the interest rate that is quoted on bonds and loans.
- **Real interest rate** - Real interest rate adjusts for the inflation and gives the real rate of a bond or a loan.
- **Monetary Policy** - Monetary policy is the macroeconomic policy laid down by the Central bank. It involves management of money supply and interest rates to achieve macroeconomic objectives like inflation, consumption, growth and liquidity. Depending on growth-inflation dynamics, the central bank can either pursue an easy or a tight monetary policy. An expansionary/easy/ accommodative monetary policy involves expansion of money supply, mainly by keeping interest rates low, to boost economic growth. A contractionary/tight monetary policy involves reduction in money supply to control inflation in the economy.
- **Liquidity** - The Central bank of a country has to maintain an appropriate level of liquidity to help meet the credit demand of the country as well as maintain price stability. This is done by way of direct monetary policy tools such as policy rates and cash reserves to be maintained with it by banks. It is also done by indirect means such as Open market Operations (OMO) which involve sale and purchase of Government securities.
- **Fiscal Deficit** - This takes place when India's expenditure rises than its revenue. To fill this gap, the Government raises debt by issuing Government/ sovereign bonds. Fiscal deficit is usually compared with GDP to understand the financial position of the country. Rising fiscal deficit to GDP ratio is not good for the country, which requires immediate attention to cut expenditure and/or increase the source of revenue.
- **Current Account Deficit (CAD)** - Current account deficit is a measurement of a country's trade where the value of imports of goods and services as well as net investment income or transfer from abroad is greater than the value of exports of goods and services for a country. This indicates that the country is a net debtor of foreign currency, which increases the pressure on the country's existing foreign currency reserves. Current account surplus is the opposite of this.
- **Investment** - In private investment, the funds come from a private, for-profit business. A few examples of private investment are a private company's manufacturing plant, a commercial office building, or a shopping mall. In public investment, the money exchanged comes from a governmental entity such as a city, state, country, etc. It would involve roads, airports, dams and other public infrastructure.

Market Indices

- **Nifty 50 Index** - It is a well diversified 50 stock index accounting for 22 sectors of the economy. It is used for a variety of purposes such as benchmarking fund portfolios, index based derivatives and index funds.
- **CRISIL Composite Bond Fund Index** - It seeks to track the performance of a debt portfolio that includes government securities and AAA/AA rated corporate bonds.

Fixed Income Indicators

- **Repo Rate** - The rate at which the RBI lends money to commercial banks is called repo rate. It is an instrument of monetary policy. Whenever shortage of funds banks has, they can borrow from the RBI.
- **Cash Reserve Ratio (CRR)** - CRR is the amount of funds which the banks need to keep with the RBI. If the RBI decides to increase the CRR, the available amount with the banks comes down. The RBI uses the CRR to drain out excessive money from the system.

Fixed Income Indicators

- **Marginal Standing Facility (MSF)** - It is a rate at which the RBI provides overnight lending to commercial banks over and above the repo window (repo rate). The interest rate charged is higher than the repo rate and hence it is used when there is considerable shortfall in liquidity.
- **Statutory Liquidity ratio (SLR)** - In India, commercial banks are required to maintain a certain percentage of their total deposits (net demand and time liabilities) in notified Government securities to ensure safety and liquidity of deposits. This percentage is known as the SLR rate. If the RBI or Central Bank reduces the SLR rate, it means that higher liquidity will be available to banks for their lending activity and vice-versa.

Others

- **Goods and Services Tax (GST)** - The GST is one of the biggest indirect tax reforms, with an aim to make India one unified common market. It is a single tax on the supply of goods and services, right from the manufacturer to the consumer. Credits of input taxes paid at each stage will be available in the subsequent stage of value addition, which makes GST essentially a tax only on value addition at each stage. The final consumer will thus bear only the GST charged by the last dealer in the supply chain, with set-off benefits at all the previous stages.
- **Foreign institutional investors (FIIs)** - FIIs are those institutional investors who invest in the assets belonging to a different country other than that where these organizations are based. These are the big companies such as investment banks, mutual funds etc, which invest considerable amount of money in Indian equity and fixed income markets, and consequently have a strong bearing on the respective market movement and currency.
- **Domestic institutional investors (DIIs)**- DIIs are those institutional investors who undertake investment in securities and other financial assets of the country they are based in. Institutional investment is defined to be the investment done by institutions or organizations such as banks, insurance companies, and mutual fund houses in the financial or real assets of a country.
- **Emerging market (EM) economy**- An emerging market economy describes a nation's economy that is progressing toward becoming more advanced, usually by means of rapid growth and industrialization. These countries experience an expanding role both in the world economy and on the political frontier.
- **Organization of the Petroleum Exporting Countries (OPEC)**- The OPEC was formed in 1960 to unify and coordinate members' petroleum policies. This was aimed at ensuring the stability of oil markets in order to secure an efficient, economic, and regular supply of petroleum to customers as well as a steady income to producers with a fair return. Members of OPEC include Iran, Iraq, Syria, Kuwait, Saudi Arabia, Bahrain, Qatar, the United Arab Emirates (or UAE), Oman, and Yemen. The OPEC countries produce 40% of the world's crude oil.
- **Federal Open Market Committee (FOMC)**- The FOMC is the monetary policymaking body of the Federal Reserve System. The FOMC is composed of 12 members - seven members of the Board of Governors and five of the 12 Reserve Bank presidents.
- **International Monetary Fund (IMF)**- The IMF, formed in 1945, is an international organization of 189 countries, headquartered in Washington, D.C. The key objectives include fostering global monetary cooperation, securing financial stability, facilitating international trade, promoting high employment and sustainable economic growth, and reducing poverty around the world.

About Us

PNB MetLife India Insurance Company Limited (PNB MetLife) is one of the fastest growing life insurance companies in the country, having as its shareholders, MetLife International Holdings LLC. (MIHL), Punjab National Bank Limited (PNB), Jammu & Kashmir Bank Limited (JKB), M. Pallonji and Company Private Limited and other private investors, with MIHL and PNB being the majority shareholders. PNB MetLife has been present in India since 2001.

PNB MetLife brings together the financial strength of a leading global life insurance provider, MetLife, Inc., and the credibility and reliability of PNB, one of India's oldest and leading nationalised banks. The vast distribution reach of PNB together with the global insurance expertise and product range of MetLife makes PNB MetLife a strong and trusted insurance provider.
